

# Statement of Volatility – Dell P2225H Monitor

**⚠ CAUTION: A CAUTION indicates either potential damage to hardware or erasure of data and tells you how to avoid the problem.**

The P2225H Monitor contains both volatile and non-volatile components. Volatile components erase their data immediately after power is removed from the component. Non-volatile components continue to retain their data even after power is removed from the component. The following non-volatile components are present on the P2225H Monitor system board.

**Table 1. List of non-volatile components on system board**

Description	Reference designator	Volatility description	User accessible for external data	Remedial action (action necessary to erase data)
System EEPROM	U13	Non-Volatile memory, 16 K-bit For Storage of system setting (OSD)	No	NA
VGA EDID EEPROM	U2	Non-Volatile memory, 2 K-bit For Storage of VGA EDID	No	NA
System flash	U16	Non-Volatile memory, 8 M-bit For Storage of system firmware	No	NA

**⚠ CAUTION: All other components on the system board erase data if power is removed from the system. Primary power loss (unplugging the power cord and removing the battery) destroys all user data on the memory (DDR4, 2667 MHz). Secondary power loss (removing the on-board coin-cell battery) destroys system data on the system configuration and time-of-day information.**
