

TROUBLESHOOTING

No image

1. Ensure the power plug and, in case of external sources, the video-cable plugs are installed correctly at both ends.
2. Check if the main power switch is set to "1"
3. Check if the e-Screen is not in standby mode by pressing the on/off button on the remote or e-Screen control pad.
4. Make sure the correct input is selected.
5. Check that source equipment is operating correctly, for instance:
 - The source is turned on and not in standby or sleep mode
 - All video cables are not damaged (e.g. cable breaks or bent pins inside the connector)
 - If possible check with other source and cables
6. In case of long video cables (>5m): check signal transmission with the originally supplied cables.
7. In case of installations with peripheral equipment such as distribution amplifiers, matrix switchers, signal boosters, etc.: check the working of the screen with the source directly connected to the e-Screen, using the originally supplied cables.

Bad image quality of source signal

1. Check that source equipment is operating correctly, for instance:
 - All video cables are installed correctly at both ends and are not damaged (e.g. cable breaks or bent pins inside the connector).
 - Make sure the resolution of the input signal is set to the native resolution of the e-Screen 3840x2160@30Hz or 60Hz).
2. If possible check with other source and cables.

The image is positioned incorrectly

1. Disconnect and reconnect the signal cable
2. Restart the entire system, make sure to first switch on the monitor and secondly the source or OPS PC
3. Perform a factory reset from the menu of the e-Screen

The image is too light or too dark

1. Adjust the brightness and contrast of the e-Screen
2. Make sure no direct light source shines on the brightness sensor on the backside of the e-Screen

The picture color looks poor

1. Check the colour picture settings of the e-Screen
2. Perform a factory reset from the menu of the e-Screen

No Touch

1. Make sure the USB cable is installed correctly at both ends and is not damaged
2. Disconnect and reconnect the USB cable after 10 seconds, please allow the PC to detect the hardware. This can take a few seconds
3. Reboot the PC.

Touch performance is poor or touch recognition is not at the correct position.

1. Make sure there are no unwanted objects in range of the touch system (e.g. jacket sleeves).
2. Make sure there are no light sources (e.g. halogen lamps or sun light) shining directly at the surface of the e-Screen.
3. Place your finger or stylus in a 90 degree angle on the touch surface.
4. Do not hold the stylus too close towards the tip.
5. Please make sure the inside of the bezel (where the touch sensors are placed) is clean(ed) and free of items blocking the view of the sensors.
6. Turn off scaling in the display settings of the source.

Touch recognition is slow

1. Close all active windows on the PC
2. Reboot the PC

OPERATIONS

TURNING THE DISPLAY ON AND OFF

Turning the display on

1. Connect the display to an AC power outlet
2. Ensure the AC switch is set to "I".
3. Press the central control button on the front of the lower bezel. Alternatively you can use the power button on the remote control.

Turning the display off

With the Power on, press and hold the central command button on the center of the lower bezel. A warning message will appear. Alternatively you can use the power button on the remote control. To turn off power completely, turn the AC switch to „O“ or disconnect the AC power cord from the power outlet.

Note: If there is no signal input for a period of time, the display will automatically go into power saving (sleep) mode.

ADJUSTING THE VOLUME AND INPUT SOURCE

Adjusting the Volume

1. Bring up the quick launch menu by pressing the central control button. Adjust the volume slider to adjust volume. Alternatively, use the + and - button on the remote control to adjust volume.

button to go to the source menu. Alternatively, push the source button on the remote control to bring up the source menu. In the source menu, simply touch a source to switch to that source.

2. If the display cannot find a source, a "No signal" message will appear.

Selecting the input source

1. Bring up the quick launch menu by pressing the central control button. In the quick-launch menu, press the source
